Kupkin, S. A.
PROPHYLAXIS AND TREATMENT OF DISEASE IN
CALVES BY MATERNAL BLOOD (Lecheniye i
Profilaktika Boleznay Telyat Krov'yu Materi). Dec 60
[7]p. RTS 1727.

Order from LC or SLA mu\$1.80, ph\$1.80 61-15385

Trans. of Veterinariya (USSR) 1955 [v. 32] no. 2,
p. 38-42.

Transfusion of maternal blood, which is assumed to
contain compatible proteins as well as antibodies, has
been used consistently at the Bryanak collective farms
since 1949 for prophylaxis of paratyphoid and coliform
bacillus infections in calves. Blood transfusion has
undoubted advantages over serum injection. Transfu-
sions of maternal blood were used effectively, alone
or in conjunction with other therapeutic agents, in
treatment of digestive disorders, diseases of the
respiratory system, and coliform bacillus and para-
typhoid infections. Transfusions had little effect on
calves suffering from vitamin A deficiency.
